INTELLIGENT VOIP SOLUTIONS AT WORK

MIX TRUNX- IP TRUNKING FOR VOIP APPLICATIONS

MIX Trunx (IP Trunks) provide a solid IP to PSTN connection for a variety of VOIP applications and are the basis of most MIX Networks Services.

MIX Trunx can be set up to use SIP using the G.711 (ulaw) or G.729 codec. Each MIX Trunk enables one (1) simultaneous call and can be used with a Virtual PBX or as a stand-alone product to enable → PSTN connectivity.

MIX Networks partners with MPLS Tier 1 Carriers like Level (3), Verizon, and Global Crossing to ensure that End Users enjoy high quality VOIP services. Available in Flat-Rate or Metered options, MIX Trunx offer substantial savings and flexibility.

MIX Trunx allow for maximum scalability in network environments, as quantities can be increased as needed.
